

MAIL AND PARCEL WEIGHING SOLUTIONS FOR POSTAL ACTIVITIES

▼ POSTAL POINTS OF SALE

The Ci10/50-P range has been designed to interface with mailing IT systems. A modular approach allows for different sizes and capacities to fit various counter configurations. Countertop and undercounter platforms with or without built-in-display, along with fully graphic terminals are available.

KEY FEATURES

- 10, 20 or 30kg maximum capacity, with 1g legal for trade accuracy up to 3kg
- Modern customer oriented interface with high contrast large digital and graphic displays
- Low footprint
- Low power consumption
- Plate dimension: 240x200 mm to 500x400 mm depending on model

▼ DISPLAY CONFIGURATIONS

One digital display

One digital display and one display for customer (digital)

One digital display and one display for customer (graphic)

▼ OEM MODULES FOR FRANKING KIOSKS AND POSTAL LOCKERS

Perfectly integrated: our engineering team designs standard electronics modules and mechanical assemblies in cooperation with equipment manufacturers.

Integration into a free-service franking kiosk

▼ INDUSTRIAL MAIL

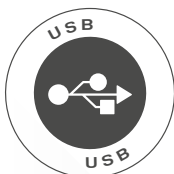

A comprehensive range designed for parcel weighing (up to several dozen kgs), that can meet the harsh conditions of vehicle loading / unloading operations or automated handling lines.

Some models offer a patented dynamic overload protection device, that grants the durability of metrological performance.

▼ CONNECTIVITY

Depending on the model, RS232, USB and Ethernet are available, along with Wifi and bluetooth wireless capacities. Software drivers can be supplied to ease developers' work.

Images for advertising through the graphic display can be downloaded from the different postal IT systems.

▼ PRODUCTION AND QUALITY

With major production capacities and highly automated testing means, we know we can deploy large infrastructure projects. Our whole range has been accredited and meets the regulatory requirements that come with weighing operations determining transport fees.
